

### **Content of training**

Advanced training courses are always customized to your individual needs. The outline below indicates a typical starting point:

- Considerations of the effects of experimental design on analysis possibilities; how do the choices you make in the configuration affect the results you get?
- Relationship of the research question to the coding scheme
- Tips and tricks for optimizing the coding scheme to make scoring easier
- What to score and what not to score
- Live or offline? Which methods suit your research best?
- How to make the best use of coding scheme elements; groups, subjects, behaviors, modifiers, numerical modifiers, assigning keystrokes etc.
- How to set up a project for use by students or multiple scorers.

The course includes a mixture of theory, demonstrations and hands-on exercises.

### **Your trainer**

All Noldus training courses are given by qualified trainers who have to meet exacting standards of presentation skills and product knowledge. For advanced training courses trainers have to meet additional criteria of having the appropriate level of training experience and scientific, statistical or otherwise relevant knowledge. Standard training courses can be given in a wide variety of languages, but because of the additional requirements for advanced trainers, it may not be possible to supply this in your language.

### **Location of training**

Advanced training courses can be given at your own site or in a local Noldus office. Different kinds of training sessions can be combined. For example, a one-day standard product training for new users could be followed by a half day custom training on specific hardware associated with The Observer, again followed by a half day advanced analysis course. Depending on your needs and budget, most training courses can also be given Remotely, via the internet.

### **Length of training**

The course can be adapted to either a half day or full day depending on your individual needs.

### **Costs**

Please contact your Noldus sales representative for a price indication.
