

### **Content of training**

Advanced training courses are always customized to your individual needs. The outline below indicates a typical starting point:

- Considerations of the effects of experimental design on analysis possibilities
- Data selection: nesting, filtering, combining criteria with and/or operators, intervals, etc
- Dependant variable parameters: how are they calculated and what can they be used for
- Tricks for analysis of data from EthoVision in Excel
- How to export EthoVision to SPSS or other statistical analysis packages
- Fine-tuning analysis settings using real-time feedback and the raw data file

The course includes a mixture of theory, demonstrations and hands-on exercises.

### **Your trainer**

All Noldus training courses are given by qualified trainers who have to meet exacting standards of presentation skills and product knowledge. Trainers giving advanced training courses have to meet additional criteria of having the appropriate level of training experience and scientific, statistical or otherwise relevant knowledge for the advanced training course. Standard training courses can be given in a wide variety of languages, but because of the additional requirements for advanced trainers, it may not be possible to supply this in your language.

### **Location of training**

Advanced training courses can be given at your own site or in a Noldus office. It can be combined with other courses so that for example you could have a one-day standard product training for new users, followed by a half day custom session on how to use a particular hardware setup you have just purchased, rounded off by a half day advanced analysis course.

If you are already an experienced EthoVision user, this training is available as a remote training via the internet.

### **Length of training**

The course can be adapted to either a half day or full day depending on your individual needs.

### **Costs**

Please contact your Noldus sales representative for a price indication.
